APPLICANT: GARVIN, ROBERT T.

APPLICANT: GARVIN, ROBERT T.

APPLICANT: MALEK, Lawrence T.

TITLE OF INVENTION: AN EXPRESSION SYSTEM FOR THE SECRETION

TITLE OF INVENTION: OF BIOACTIVE HUMAN GRANULOCYTE MACROPHAGE COLONY

TITLE OF INVENTION: STIMULATING FACTOR (GM-CSF) AND OTHER HETEROLOGOUS

TITLE OF INVENTION: PROTEINS FROM STREPTOMYCES

NUMBER OF SEQUENCES: 91

/tissue_type="carcinoid"
/lab_hofe="MIDE"
/clone lib="NCI CGAP Lu24"
/note="organ: lung; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Plasmid DNA from the normalized library NCI CGAP Lu2 seperaed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1414920-1417991 and 1520904-1522439). Subtraction by Bento
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CDNA Library Preparation: M. Bento Soares, Ph.D. CDNA Library Arrayed by: Greg Lennon, Ph.D. DNA Sequencing Arrayed by: Greg Lennon, Ph.D. DNA Sequencing Center DNA Sequencing Content Clone distribution: NII-GAP clone distribution information can be found through the I.M.A.G.B. Consortium/LLNL, send email to: info@image.llnl.gov

modified polylinker; Plasmid DNA from the normalized library NCI CGAP LuS was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 114920-141791 and 1520904-1522439). Subtraction by Bento Soares and M. Patima Bonaldo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        BE873976 895 bp mRNA linear EST 20-OCT-2000 601484045F1 NIH_MGC_69 Homo sapiens cDNA clone IMAGE:3886571 5',

/colne_lib="Tg CAST Tachyzoite cDNA Library was constructed by Reliang Tang, and Robert Cole at Washington University.
CDNA was synthesized from poly(A)+ mRNA using the template-switching PCR method (SWART CDNA Kit, BD Blossioness). First strand cDNA was reverse transcribed using the CDS III/3' primer and a 5' template switch primer (Smart IV primer). The product of the first strand synthesis was PCR amplified using the same primer set and the fragments were digested with Sfil. The fragments were size selected, ligated into a modified pBluescript vector (obtained from Michael Mhite, Montana State University)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CF370966

containing directional Sfil sites, and electroporated into ElectroTen Blue cells. Vector: Sfil sites were added to the multiple cloning region of pBluescript SK+ between the BamHI/RcoRI sites. The modified polylinker has the following sequence: 5'GAATTCGGCCATTACGGCC (G)n-- insert--GOCCGCTCGGCCCACGGATCC3' where n=3-4 G nucleotides. WARNING: the library contains a small percentage of cDNAs derived from the human host cells. Library materials provided by David Sibley, Washington University."

First strand cDNA synthesis we primed with an oligo-dr primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pi773-pac vector. The oligonuclectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCATGCCG. The tissue was provided by Dr. Gary W. Hunninghake of the University of Iowa.
